Company Overview

StarCity Pest Control started in 2016 with the purpose of serving U.A.E citizens and residences to get rid of pest, bugs and insects in order to live a healthy and safe life. Our team members are trained to work with advanced machines, foggers, sprayers and environment friendly pesticides. We have combined experience of over 4 years in this field and have served hundreds of happy customers.

Pest Control services are little bit hard to maintain and run due to intangible chemicals, hard to maintain machineries and changing regulations. However, we managed not only to survive but also gained trust and authority in this industry with high quality and quick service on demand. Most of our bookings are from returning customers who are happy with our service. In addition, we get good amount of reference from our existing customers and well wishers.

Abu Dhabi is very large emirate including the remote areas, but we managed to provide on demand services in all the areas due to our task management expertise and expert team members.

All the pesticides and machinery equipment used by our company are validated and approved by the Ministry of Climate Change and Environment, United Arab Emirates.

Our Services

Our team members are trained to deal with all kinds of pests, bugs and insects that are hampering our regular life both indoor and outdoor. Depending on season and area our customers may require different or even customized pest control services. Hence, we are prepared to serve in all types of situation. We can eradicate pest from your room, apartment, villa, garage, shop, office, indoor hall, outdoor area, storeroom and so on. Though we can deal with every types of pests, we have listed our most demanded pest control services below:

- ✓ Cockroach control service

Types of Pests and Bugs

Bedbugs: Bedbugs are small, oval, brownish insects that can be seen on on mattress. Bedbugs are active at night and bite people while they are sleeping. Getting rid of bedbugs begins with cleaning up the places.

Cockroach: Cockroach is a commonly seen insect having six legs, two antennae and wings. Cockroaches often taint food with E. coli and Salmonella bacteria, so it's not safe to ignore these pests.

Rodent: Rodents are warm-blooded mammals with oversized front teeth for gnawing. These animals can contaminate food, damage property and spread disease. Rodents are very adaptable and hence difficult to exterminate.

Termite: There are over 2,000 different species of termites that measure between $\frac{1}{4}$ to $\frac{1}{2}$ an inch. Termites can cause massive damage to your home or property and often called “silent destroyer”.

Types of Pests and Bugs

Bee: There are about 20,000 different species of bees in the world. Killer bees have been known to chase people for over a 1/4 mile once they get excited and aggressive. All bees are not harmful but some are extremely dangerous.

Fly: Fly is an insect with two wings and has over 16,000 species around the world. Flies spread diseases rapidly because they move quickly from rotting, disease-laden garbage to exposed human foods and utensils.

Spider: Spiders are insect with eight legs, two body regions and 3 to 4 pair of eyes. While most spiders pose little or no danger to people, some species can deliver venomous bites that may cause medical issues.

Tick: Ticks are tiny insect with 6 legs that looks like sunflower seed. Though ticks may not do harm in well-built home but according to a recent CDC statement ticks can transmit over 15 types of viruses and infections.

Types of Pests and Bugs

Ant: Ants are very common which carry bacteria on their bodies, that spreads when they crawl in foods and across countertops resulting in transmitting diseases. Some species, like carpenter and fire ants, causes serious harm.

Flea: Fleas are tiny wingless bug that's 2.5 mm long. Flea bites may leave the host with numerous swollen, itchy marks. They may cause allergic reactions in some people and can transmit several diseases.

Mosquito: Mosquitoes are common bug with deadly history. Mosquitoes can transmit several dangerous illnesses to humans, including Zika virus. It's said that half of all human being's death is linked to mosquito.

Mite: Mites are tiny insect that measure less than 1 mm. Mite bites are usually not painful, producing mild skin irritation which may lead to more serious bacterial infections. Dust mites can cause allergens and even asthma attacks.
